The SNIT is the **National System of Coordination of Territorial Information**. This is a permanent inter-institutional coordination mechanism for the management of public territorial information in the country, composed of the State institutions generating and using this information. It was created through the D.S N ° 28/2006 of the Ministry of National Assets.

To maximize the benefits derived from the use of territorial information, it is necessary to work under the concept of a **Geospatial Data Infrastructure (SDI)**.

**Coordination,
through working
groups, thematic
areas, regional and
sectoral coordination**
