Administrative Data

A long journey
A new beginning

André Loranger

ISFP forum in Ecuador – Strengthening Statistical Management Practices
November 16, 2015

Why use administrative data?

A tradition of using administrative data

- *As a stand-alone source to produce national statistics*
- *To support surveys*
 - *Creation of the statistical registers*
 - *Survey collection*
- *To partially replace survey data*
- *To provide new analytical opportunities*
- *Edit and imputation*
 - *Benchmarking, calibration, calendarization*
- *Data quality evaluation*
- *Enhancing survey data – data integration*

Principle: administrative data to be used when it leads to a better balance between relevance, quality, cost and respondent burden

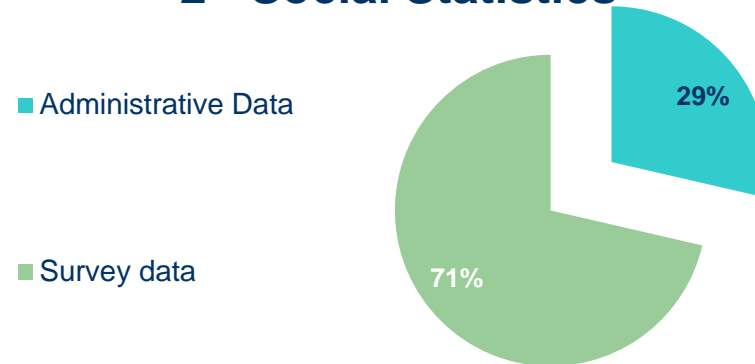

Current use of administrative data

1 - Economic Statistics

2 - Social Statistics

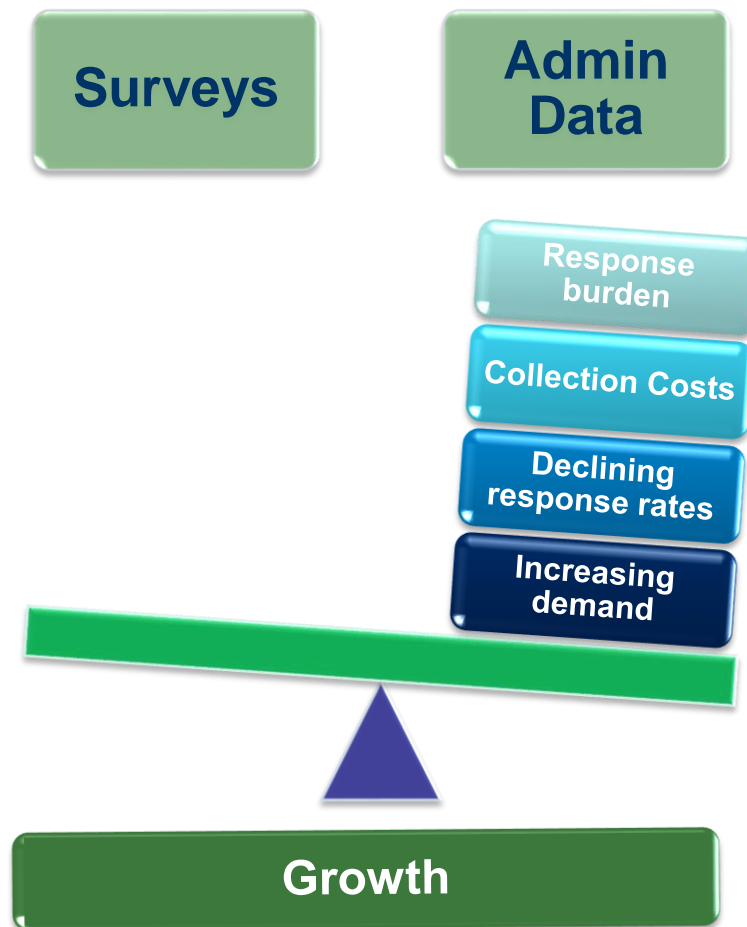

3 - Census, Demography and Aboriginal Statistics

Total

Need for a change

Five pillars to a long term strategy

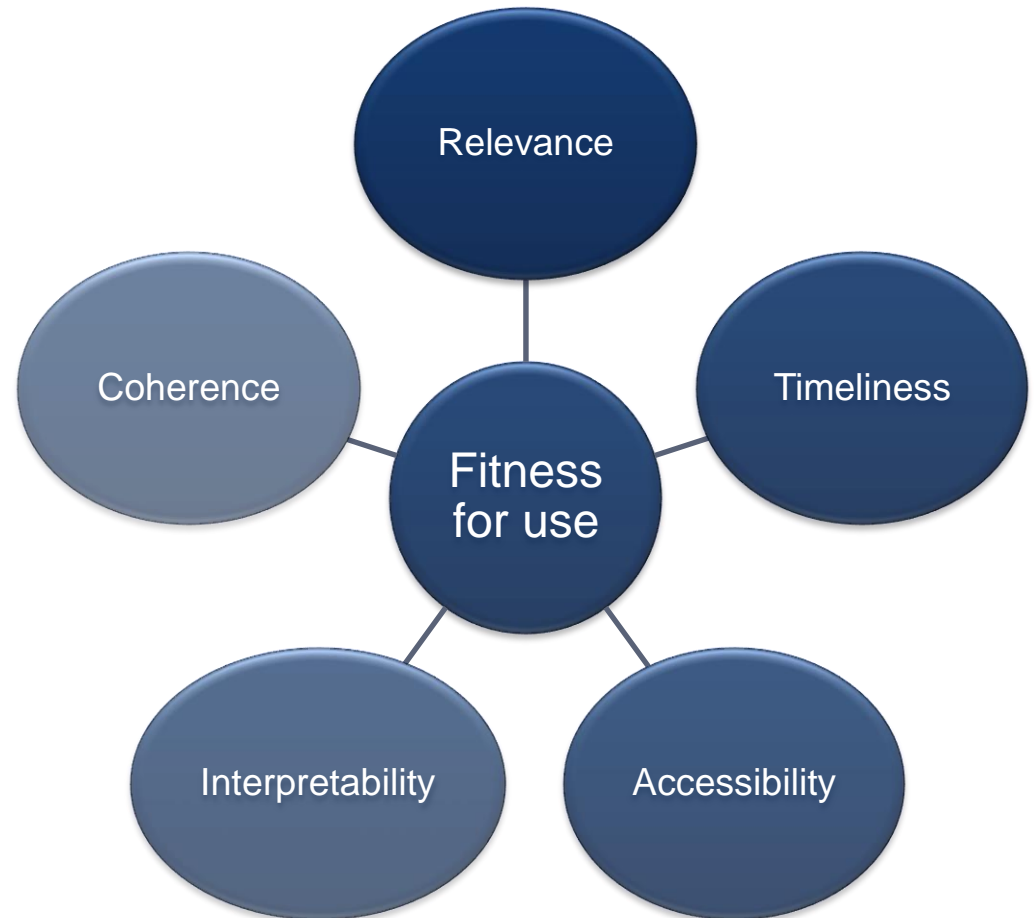

Statistics Canada influences, has access to and makes maximum possible use of administrative and alternative data in its statistical programs, resulting in reduced response burden, lower costs, improved quality and new data series for users, while maintaining public trust.

<u>Governance</u>	<u>Partnerships</u>	<u>Communications</u>	<u>Knowledge Skills, Tools</u>	<u>Research & Development</u>
<ul style="list-style-type: none"> • Policies, directives and business rules ensure a coherent approach • Organizational changes ensure focused responsibility and accountability for corporate approaches 	<ul style="list-style-type: none"> • With Source organizations - governance facilitates influence • Providing skills and expertise in exchange for data • With collaborators – shared risk in research • Best practices 	<ul style="list-style-type: none"> • With citizens promotes transparency to address privacy concerns • Within NSO promotes successful strategies and best practices 	<ul style="list-style-type: none"> • Understanding the potential and limitations of new data • Recruiting and developing “data scientists” • Tools and processes to accelerate use of new data e.g. quality evaluation framework 	<ul style="list-style-type: none"> • Using existing data in new ways • Using new data sources to assess feasibility and quality • Avoid the “all or nothing” approach

Quality Evaluation Framework

Time is the most significant challenge in adopting new sources

- A quality evaluation framework assists in making a business case for investing time, capacity and resources in acquiring a new data source
- Increases probability of usefulness of potential sources
- Establishes consistent practices in evaluating potential source data

Quality Evaluation Framework

Exploration phase – no data

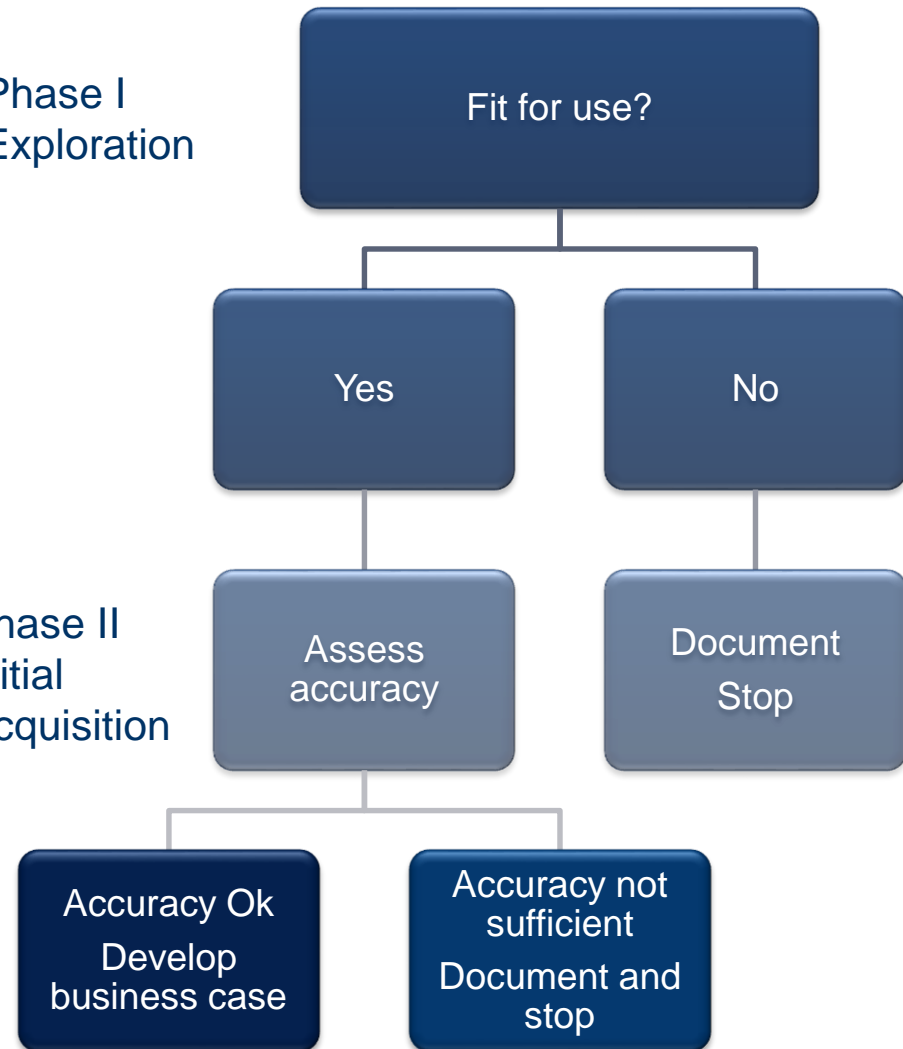

- Assess dimensions of quality
 - Relevance
 - Timeliness
 - Accessibility
 - Interpretability
 - Coherence
- 3 components:
 - Institutional environment
 - Quality of file for use
 - Impact on statistical process

Initial acquisition phase – some data

- Evaluation of accuracy
- Validate information from Phase I

Phase I
Exploration

Phase II
Initial
Acquisition

A sample of current and future work

<u>Governance</u>	<u>Partnerships</u>	<u>Communications</u>	<u>Knowledge Skills and Tools</u>	<u>Research and Development</u>
Directive on administrative data	Scanner data	Communications strategy	Community of practice – Big Data	Virtual population register
Administrative Data Division	Cell phone client files	Broadcast process integrating corporate needs	Administrative data inventory	Smart meters
Senior management committee	Credit card data	Community of practice on Big Data	Pre-processing of admin data	Webscraping
Federal code of practice	International – Big Data sandbox	Guides and templates on acquiring data	International - Big Data testing	Unique statistical identifier
